Oct. 23: Save the Buckeye Forum on OSU campus

Global Warming Impacts on Ohio's Forests and Wildlife

Join us for a **Save the Buckeye forum on OSU campus** to discuss the impacts global warming is already having on Ohio—affecting not just the buckeye, but many other trees, wildlife, Lake Erie, storms and snowfall, and more. Also learn how you can take action to Save the Buckeye!

WHAT: Save the Buckeye Forum: Global Warming Impacts on Ohio's Forests and Wildlife
WHEN: Thursday, October 23, 7:00 - 8:30 p.m.
WHERE: McPherson Chemical Lab MP (Building 053), room 1015, 140 W 18th Ave.
MAP: <http://www.osu.edu/map/building.php?building=053>
WHO: Students, faculty, staff, concerned citizens, and Buckeye fans!
RSVP: info@savethebuckeye.org or call Tom at 440-554-7203
Complimentary refreshments to be provided.

SPONSORS:

- Students for a Sustainable Campus
- Starfish: Hillel Social Action Team
- Sustainability and Environmental Responsibility Committee, Council of Graduate Students
- GradRoots (School of Environment and Natural Resources)
- Ohio State Solar Decathlon
- Save the Buckeye coalition

SPEAKERS:

- **Dr. Mohan Wali**, Professor, Natural Sciences, School of Environment and Natural Resources, on climate change
- **Dr. Davis Sydnor**, Professor, Ecosystems Management, School of Environment and Natural Resources, on tree species impacts
- **Jim Wentz**, League of Ohio Sportsmen, on wildlife impacts and the Save the Buckeye campaign

ABOUT SAVE THE BUCKEYE:

Can you imagine the Buckeye State without the Ohio buckeye? Strange, but true: global warming is pushing the growing range for our beloved buckeye and other trees north. Left unchecked, global warming could make the buckeye rare in Ohio and common in northern states such as Michigan (!). Find out what you can do to Save the Buckeye and learn about future events at www.savethebuckeye.org.
